STORY

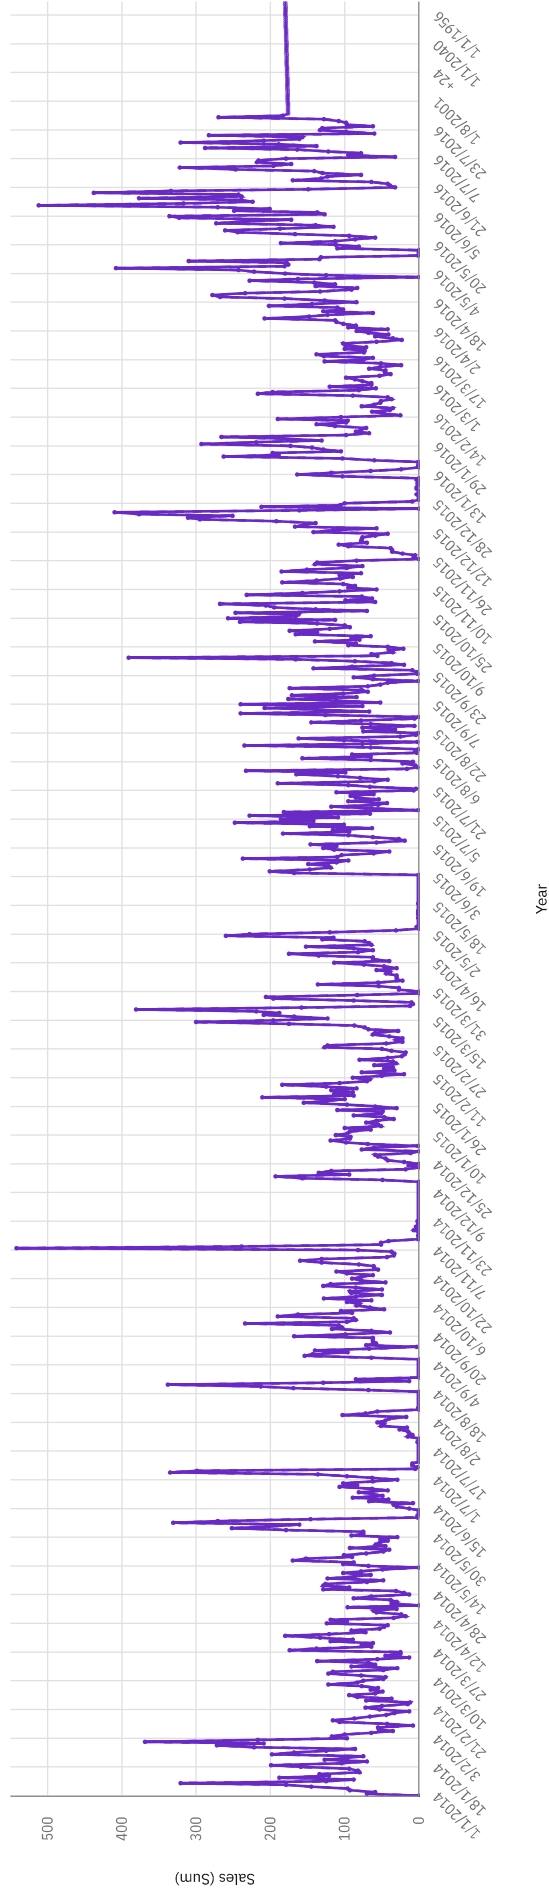

... Forecast

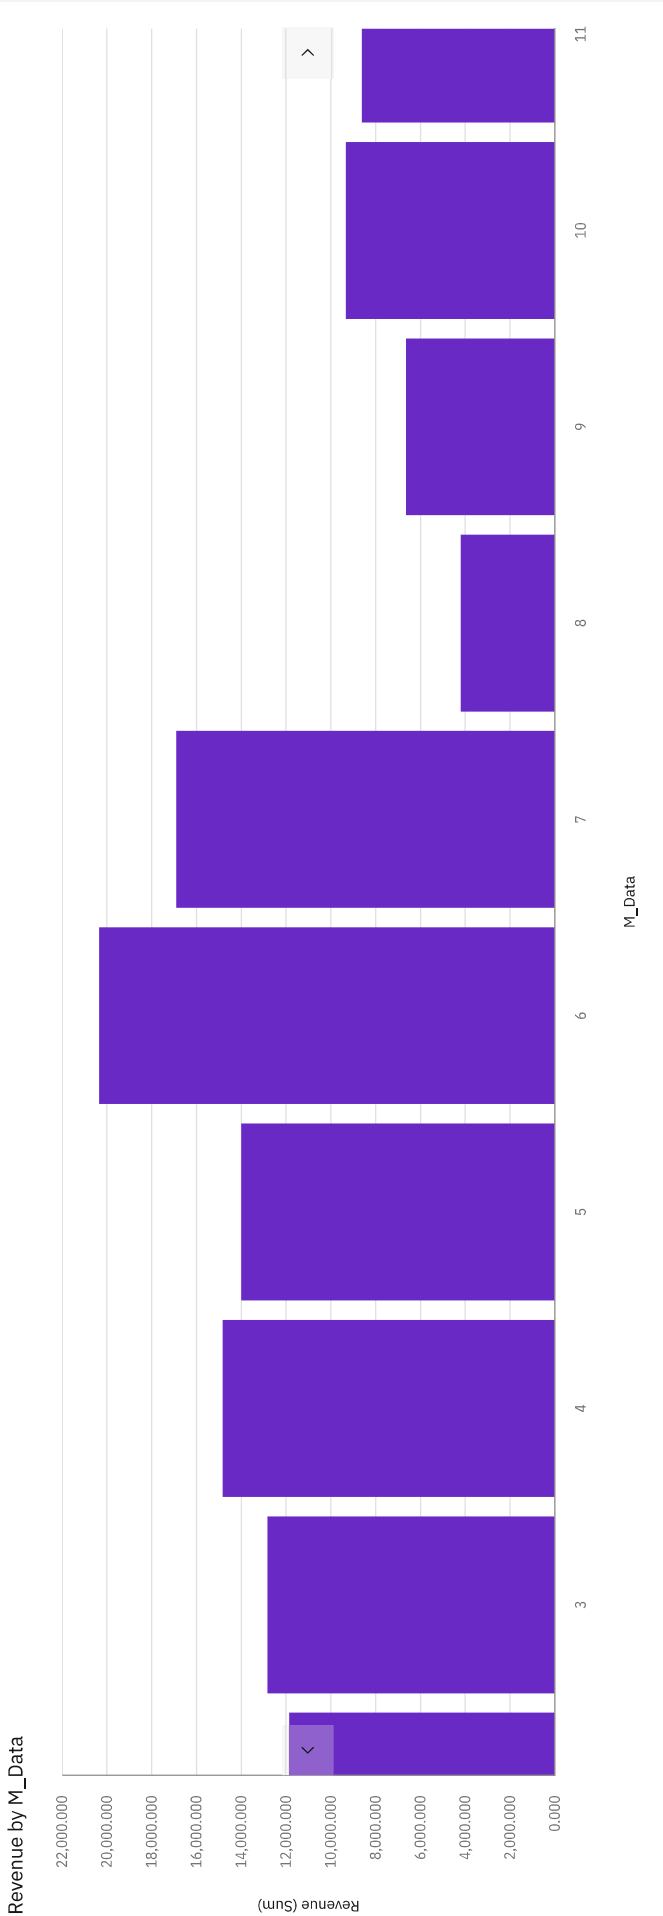

Stocks by Year

The chart displays the cumulative sum of stocks over a ten-year period. The y-axis, labeled 'Stocks (Sum)', ranges from 0 to 8,000 in increments of 1,000. The x-axis, labeled 'Year', shows dates from 1/1/2014 to 1/1/2024 in monthly intervals. The data shows a steady increase from approximately 4,500 in early 2014 to a peak of about 7,500 in late 2017. This is followed by a period of relative stability until early 2020, when there is a sharp decline to around 4,500. The stock sum then recovers, reaching approximately 7,000 by late 2023.
